# DATA STRUCTURE

## FALL 2019-2020

## Lab Final

1. Bangladesh government enlisted all of her citizen in a central database. Every citizen has a unique identification number named National_Id_Number. Any citizen of age 18 years will be eligible to get an id and endorse him/herself in database. All the regional offices can enlist a citizen by providing a unique id number. It is to mention that every other government organization will get the access right to the central database to examine the citizen's authenticity. **Which data structure would you prefer to store the identification number and access them frequently?**

2. Which will be the most convenient data structure to store Social Network "feeds". You do not know the size and things may need to be dynamically added.
