Homework Assignment -1

1) **a)** What are the ways to represent/store a graph in memory? Represent the given below graph by different data structures.

b) Find Tree edges, Forward edges, Backward edges, and Cross edges from the below graph starting from node **A**. List the edges separately and explain in what basis you classified them. Apply BFS from the graph also.

2) **a)** Describe the Real-life applications of some Graph Algorithms.

b) Find the shortest path from node 'A' to node 'G' using Dijkstra's algorithm, with simulation
